

Setsco Services Pte Ltd Attains SS 714 Accreditation

Setsco Services Pte Ltd has successfully attained SS 714 Accreditation, marking an important milestone in our continued commitment to strengthening personal data protection standards.

As a pioneer in the Singapore Data Protection Trustmark (DPTM) ecosystem since 2019, this accreditation reaffirms our longstanding role in advancing trusted and accountable data protection practices. It recognizes our governance, competence, and capability in supporting the Data Protection Trustmark framework, while reflecting the confidence placed in us by organisations across this ecosystem.

Importantly, Setsco Services is itself certified to the Data Protection Trustmark. This reinforces our commitment to **lead by example**, demonstrating accountability by **holding ourselves to the same standards we advocate** and **upholding the principles we promote** within our own operations.

Being an accreditation certification body to SS 714, it validates the robustness of our governance, including our independence and impartiality practices. It enables us to walk alongside organisations in their Data Protection Trustmark journey—providing clear, structured, and objective assessment grounded in recognised standards. While we maintain strict independence as auditors, we believe in fostering open dialogue and a constructive certification experience built on trust, transparency, and mutual respect.

At its core, our role is to support organisations in understanding and meeting the required standards, while preserving the integrity of the certification process. Through this approach, we aim to contribute meaningfully to the ecosystem and help raise the overall standard of personal data protection in Singapore and beyond.

Together with our partners and the wider community, we continue this journey—strengthening trust, upholding standards, and building a resilient and responsible data protection culture.
